ADD

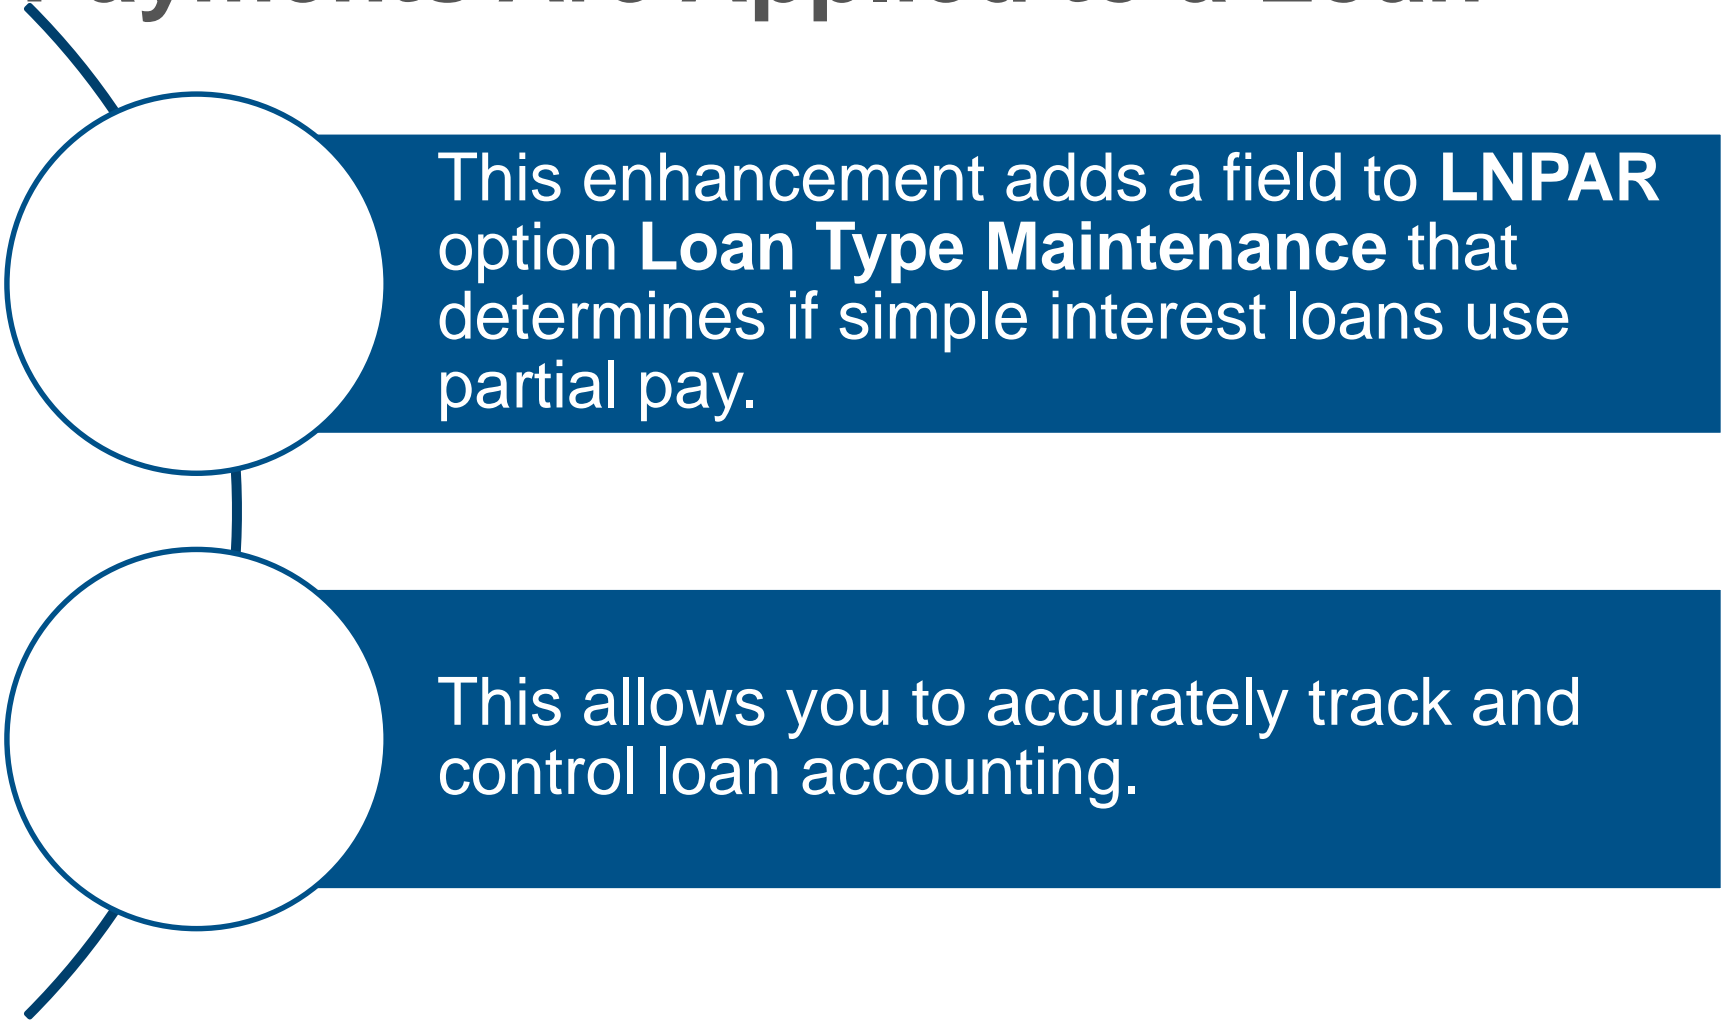

Loan transaction code parameters describe how to treat transactions entered into the system. This menu option allows you to enter and/or update parameters which describe new or existing transaction codes.

All three-digit transaction codes must be set up in your transaction code parameter file and can be maintained by you. Transaction codes 1 to 299 are bank-defined (this spans both the two-digit and a portion of the three-digit tran code ranges).

PAGE FUNCTIONS

1090859 - Line Availability for Interest Reserve Disbursements

This enhancement causes LIP Interest Reserve advances and future-dated LIP disbursements to affect the ability on the associated line of credit at the time that information is added to the LIP Disbursement file, rather than when the advance posts to the loan.

This process ensures that Interest Reserve payments and future-dated disbursements do not create an over line situation when the advances are posted to the account.

Forfeit Discount/Rebate at payoff (D, R, N) - If the loan pays off prior to the number of days and or number of payments parameters, then should the dealer forfeit all of the dealer discount or should the system calculate a rebate? This data defaults from the dealer parameters but can be changed at the loan level.

Forfeit Disc/reb by # of days - Number of days this field will work with the Number of payments to forfeit discount/rebate field.

The LIP system uses the Customer Line of Credit file to provide the architecture for establishing construction credit lines. This parameter provides maintenance capability to the file that houses the Deposit/GL through which checks or wires will clear. This parameter also defines the reconciliation account for LIP disbursement checks, if desired.
