A DIVISION OF JACK HENRY & ASSOCIATES INC[®]

SilverLake Release 2016

Miscellaneous All Apps Enhancements

1089517 – Date of Last Contact – CIF and DDA Sync

Functionality was added to automatically sync the date of last contact between the CIF and account level.

In addition, a new report, DD4510P - Account Level/ CIF level Date Last Contact Update due to Activity, was created to provide a range of information concerning the updates.

Multiple Effective Dated Maintenance per Field

Maintenance system expanded to allow multiple effective dated maintenance records for SD, DD, CD, and LN applications.

This eliminates the need to manually remember to perform future maintenance.

Alert added to notify user of effective dated maintenance when performing account maintenance.

468559 – Real Time™ Posting Phase

2

This enhancement allows certain business services transactions to hard post and remove the memo post. It also eliminates inconsistent transaction descriptions between memo and hard posting.

This enhancement is an extension of Real Time Phase 1 enhancement. If you are already using the Real Time module, this enhancement affects transactions immediately after release. You do not need to enable the additional functionality from this enhancement.

Implementation Consideration

- If you were already using the Real Time module, this enhancement affects transactions immediately after release. After you upgrade, transactions from the listed business services post immediately as they come into the system throughout the day. Because transactions post in a different order than they did before this enhancement, make sure that account disclosures are correct.

1093327 – Ability to Exclude Real Time™ Items from POD

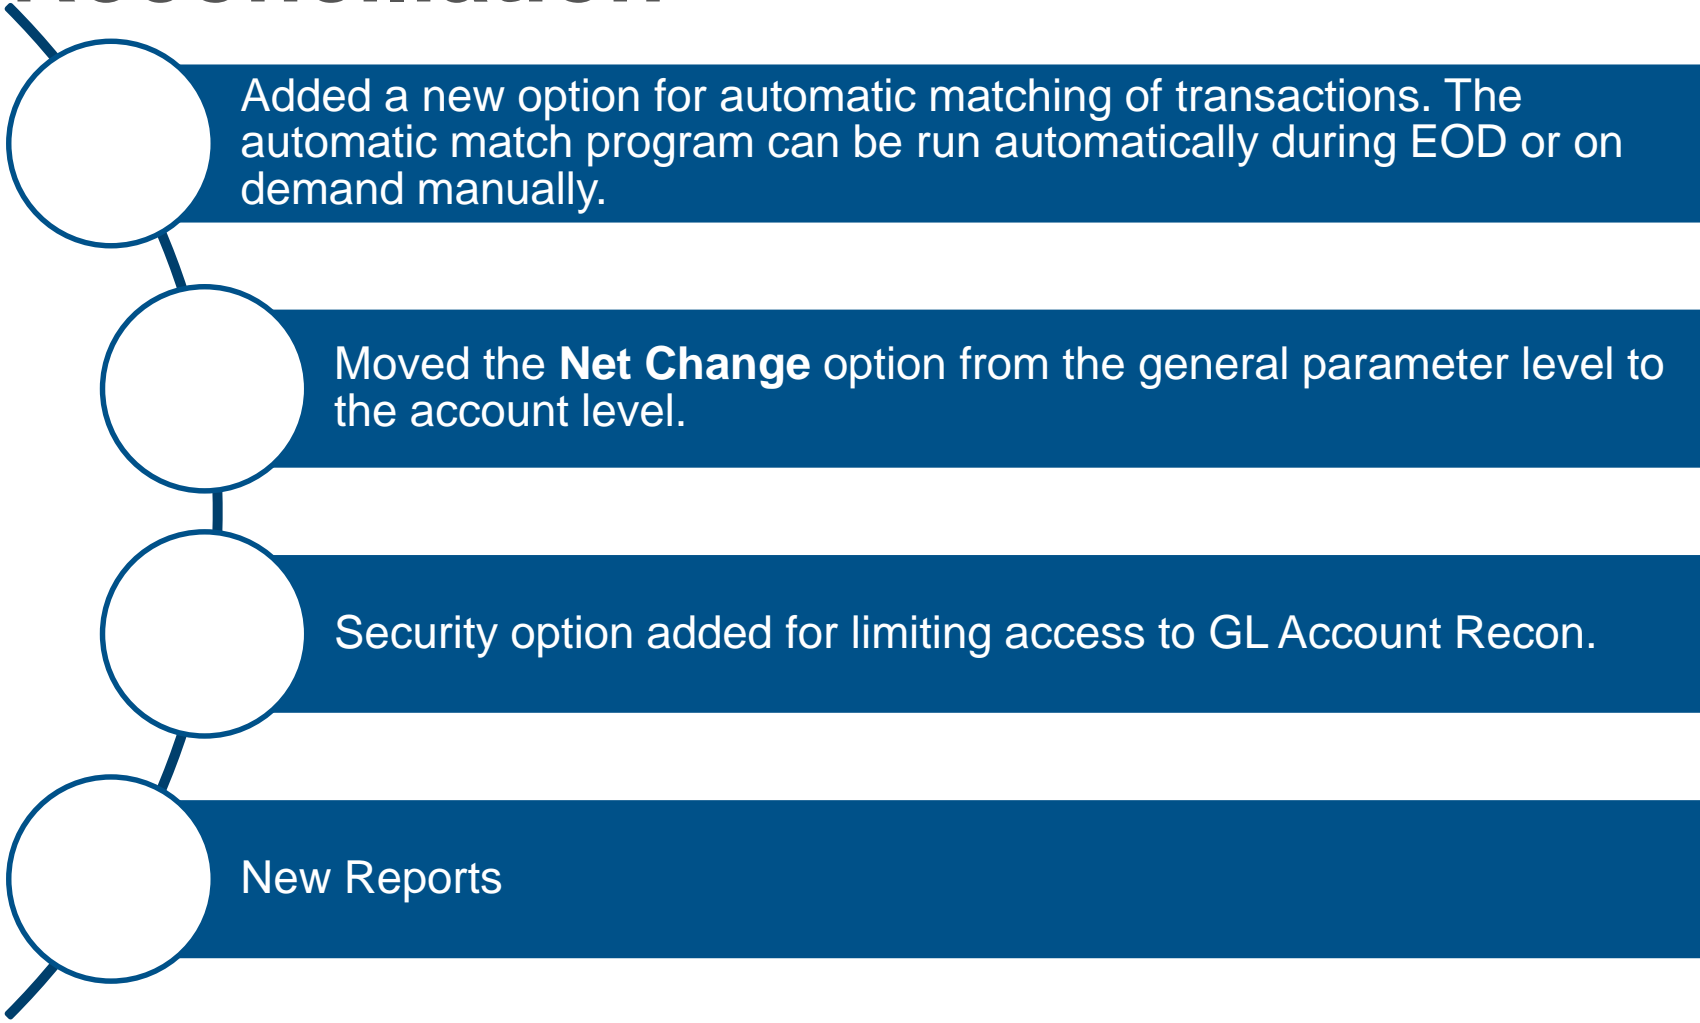

This enhancement prevents transactions posted using enhancement *468559 Real Time Phase 2* from double posting during end-of-day.

Real Time transactions received from enhancement *468599 Real Time Phase 2* are identified by a new field **JH Transaction ID**.

The programs that merge transactions in to the posting files bypass transactions, with the JH Transaction ID.

This prevents double posting of the items.

1088766 – General Ledger Account Reconciliation

Added a new option for automatic matching of transactions. The automatic match program can be run automatically during EOD or on demand manually.

Moved the **Net Change** option from the general parameter level to the account level.

Security option added for limiting access to GL Account Recon.
